'Maps' of networks and cyberspace

Photogrammetry

ascii art

Experiments

To do

contouring(touch)

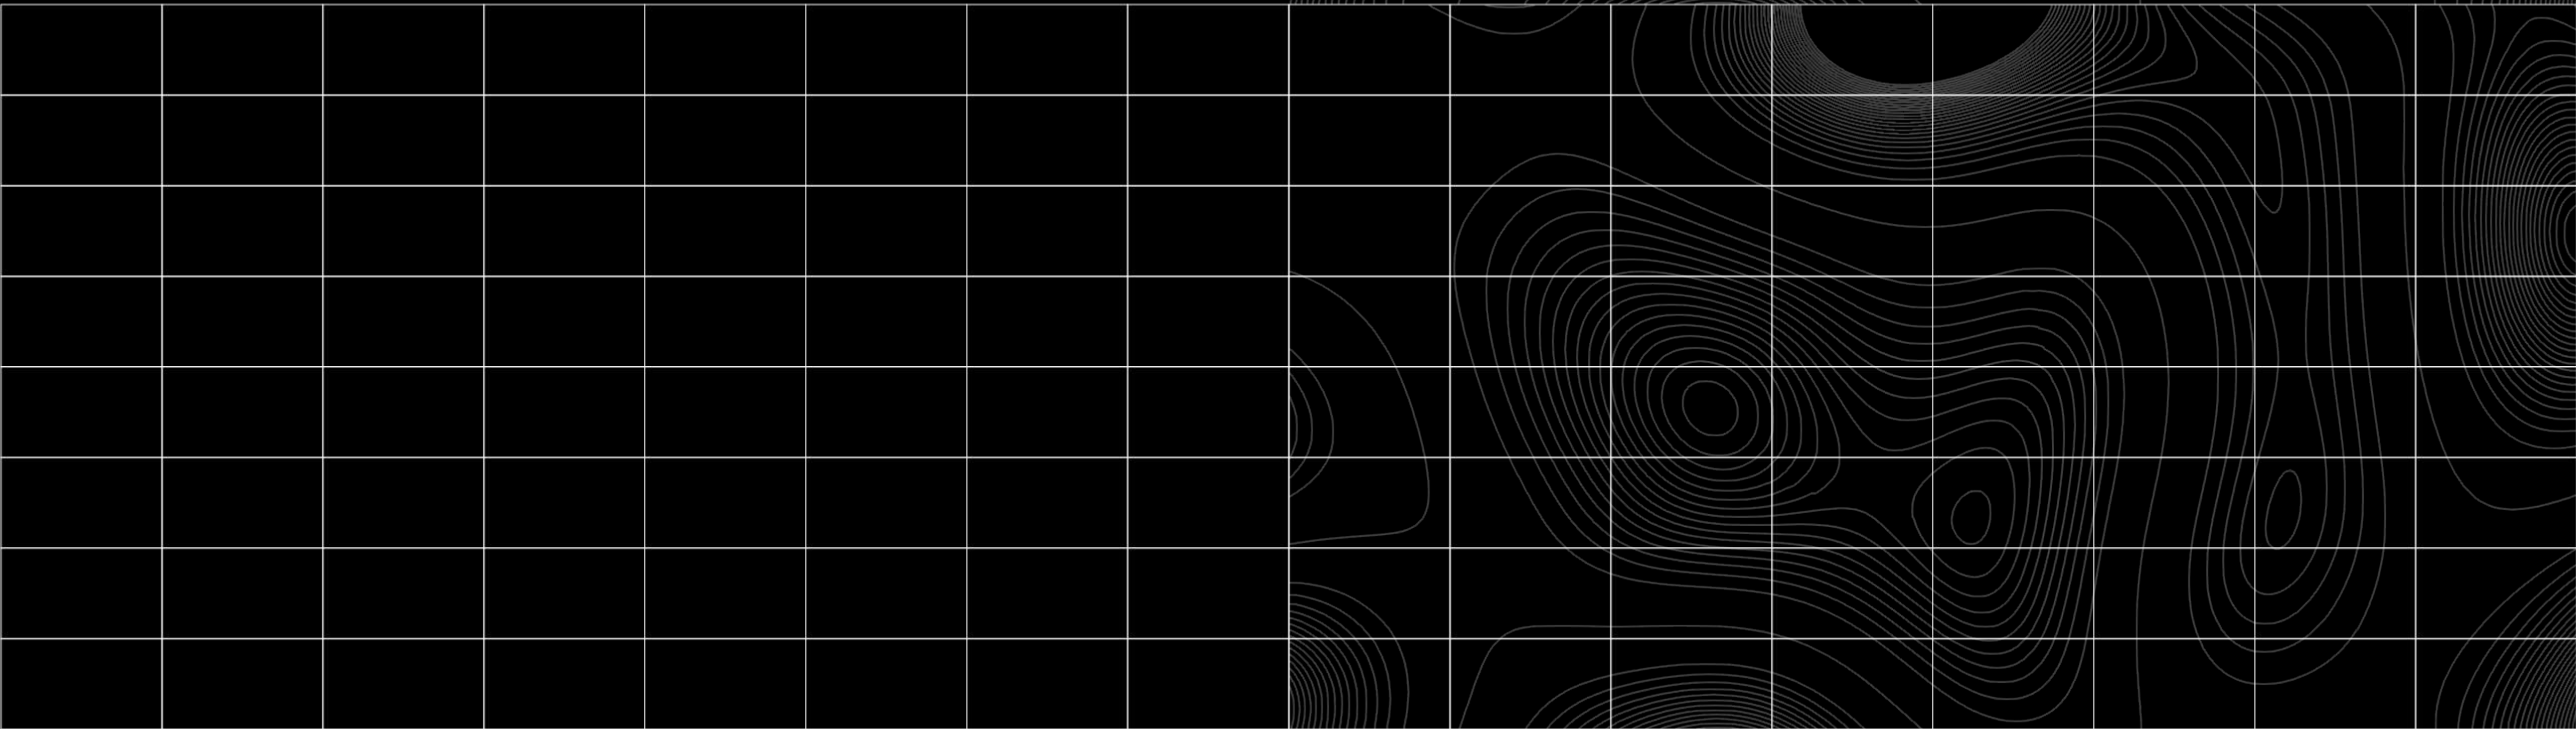

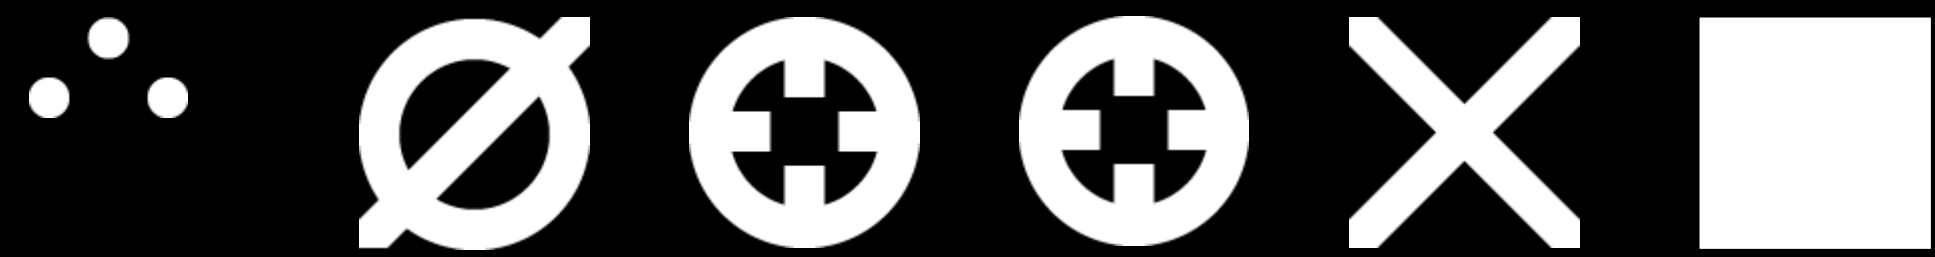

map elements(illustrator)

ascii style animation (touch)

storyboard (illustrator)

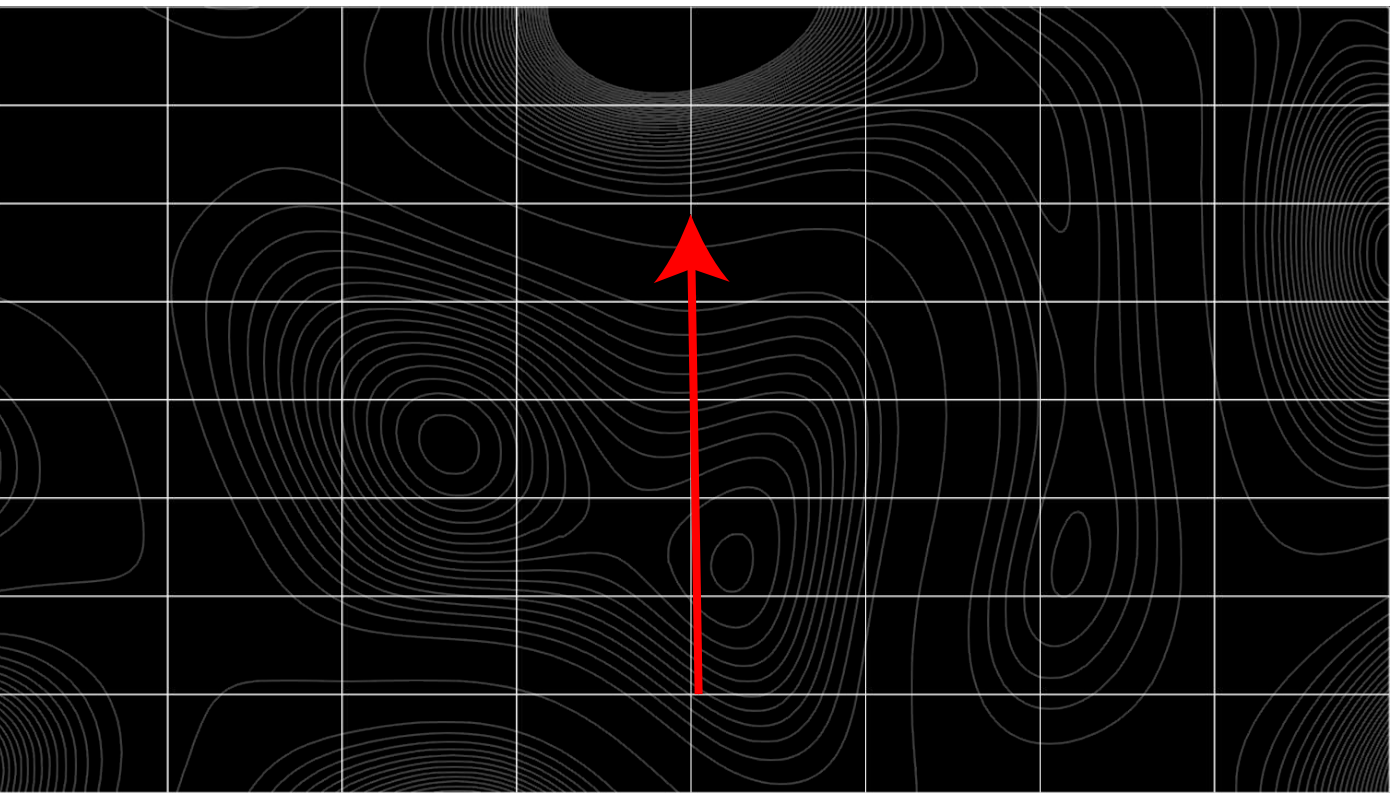

revise learning outcomes + apply(read brief on moodle again)

research walter benjamin

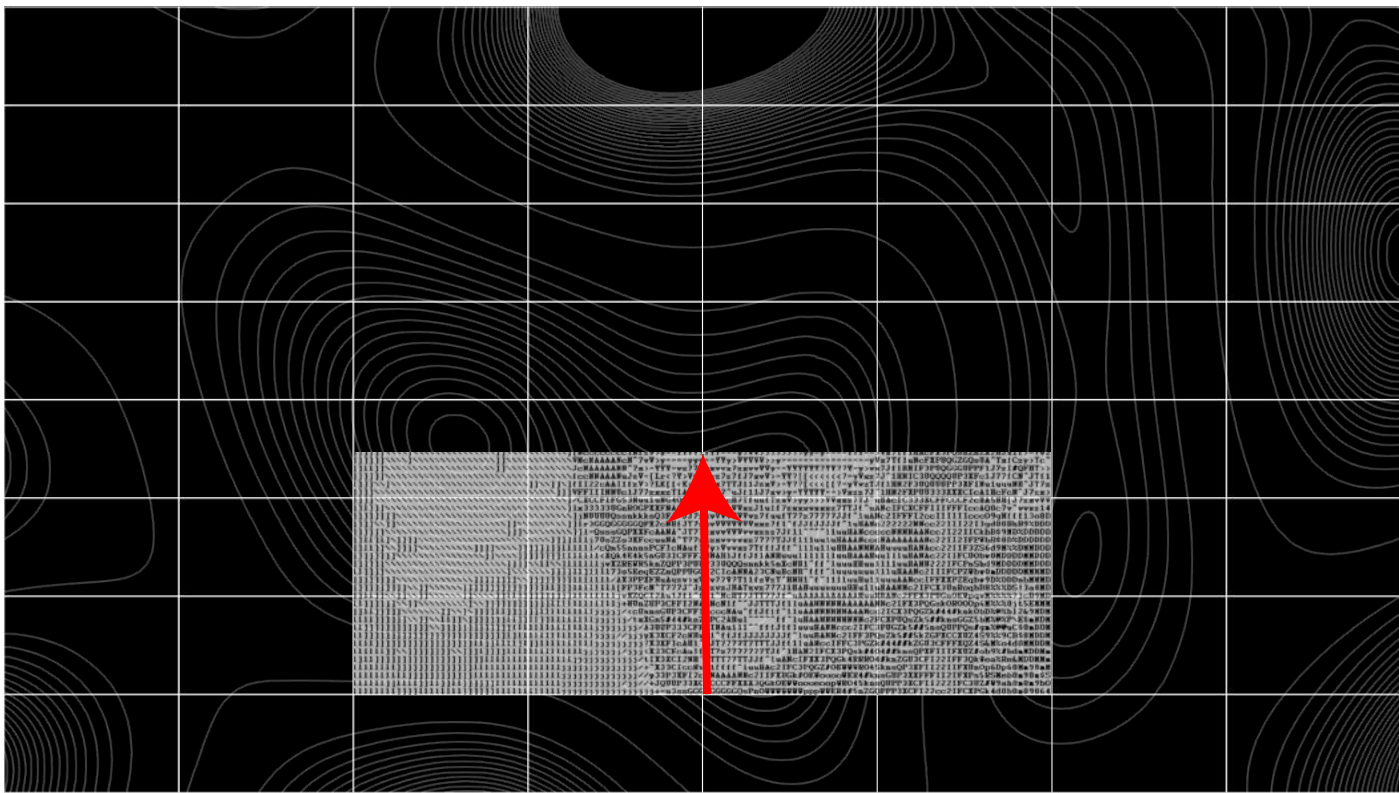

Storyboard

1920 X 1080p

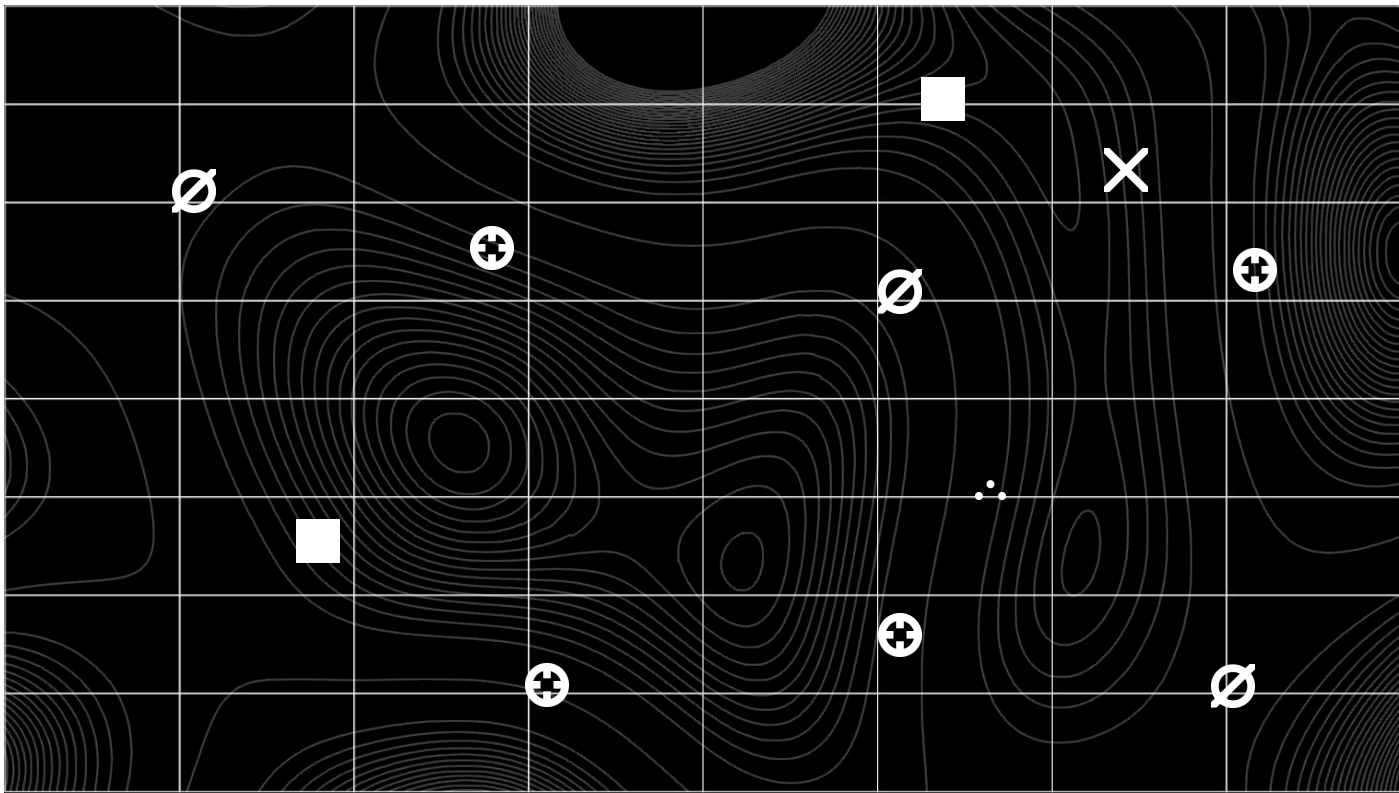

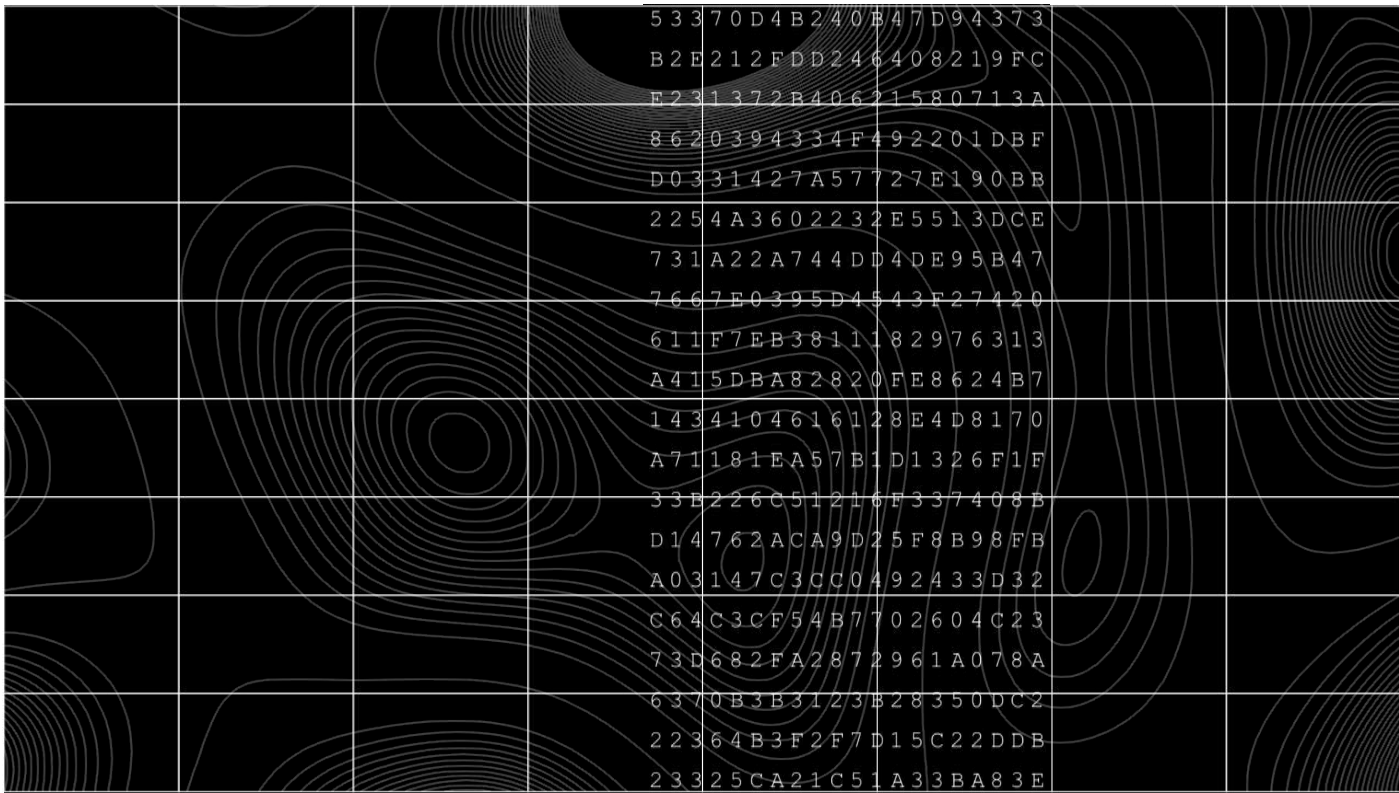

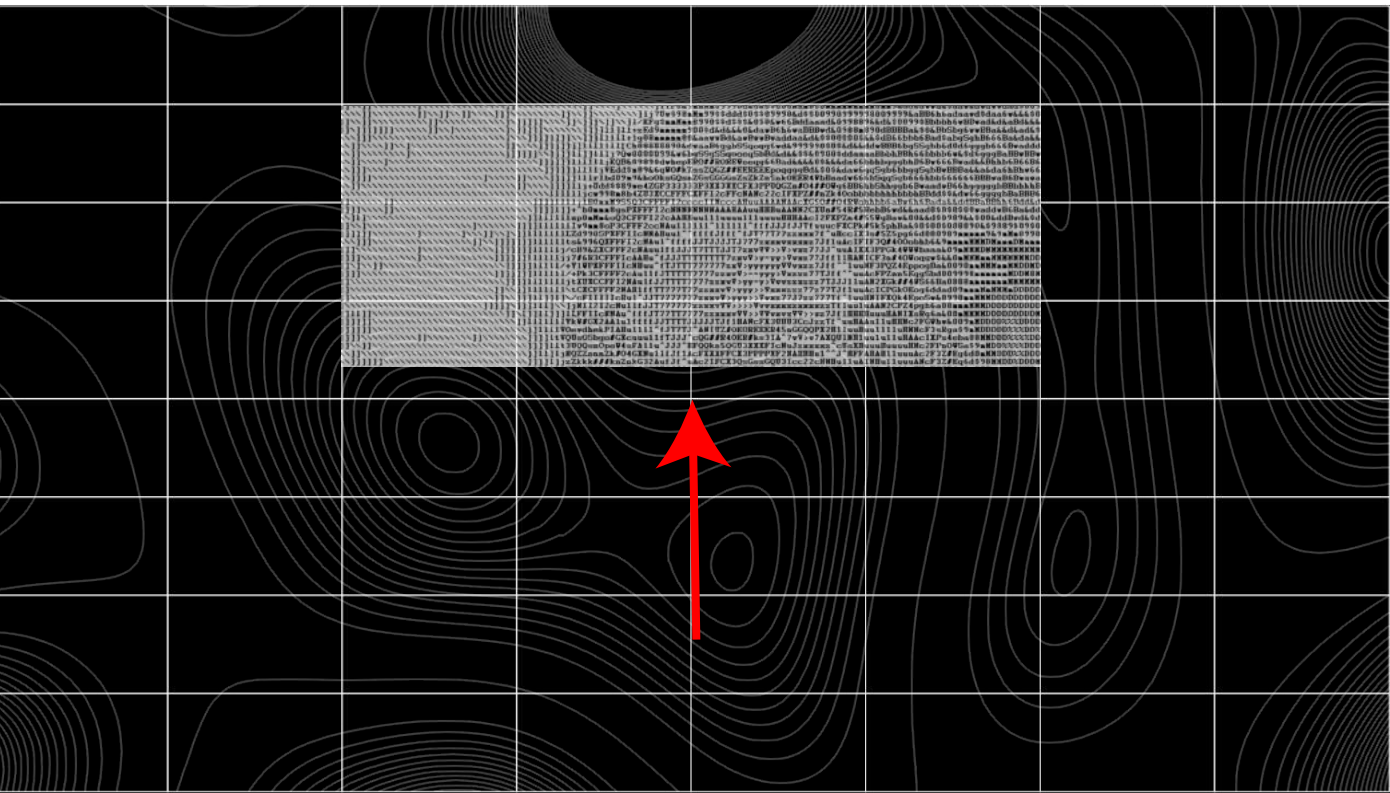

10secs
Map like landscape scrolls by and we hear the start of a dial up modem

5secs
ascii portraits revealed by mask path animtion, sound of the declaration of independence of cyberspace read by computer voice begins

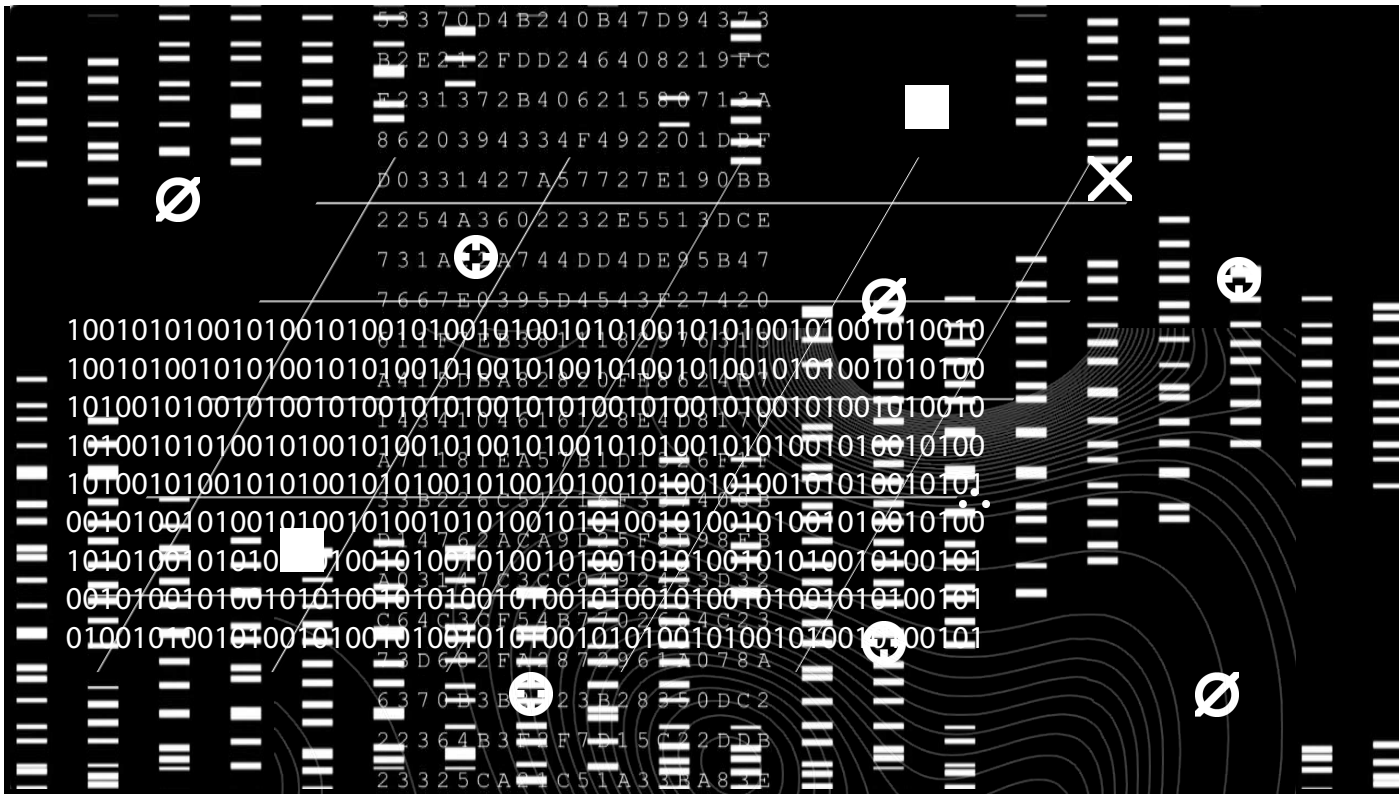

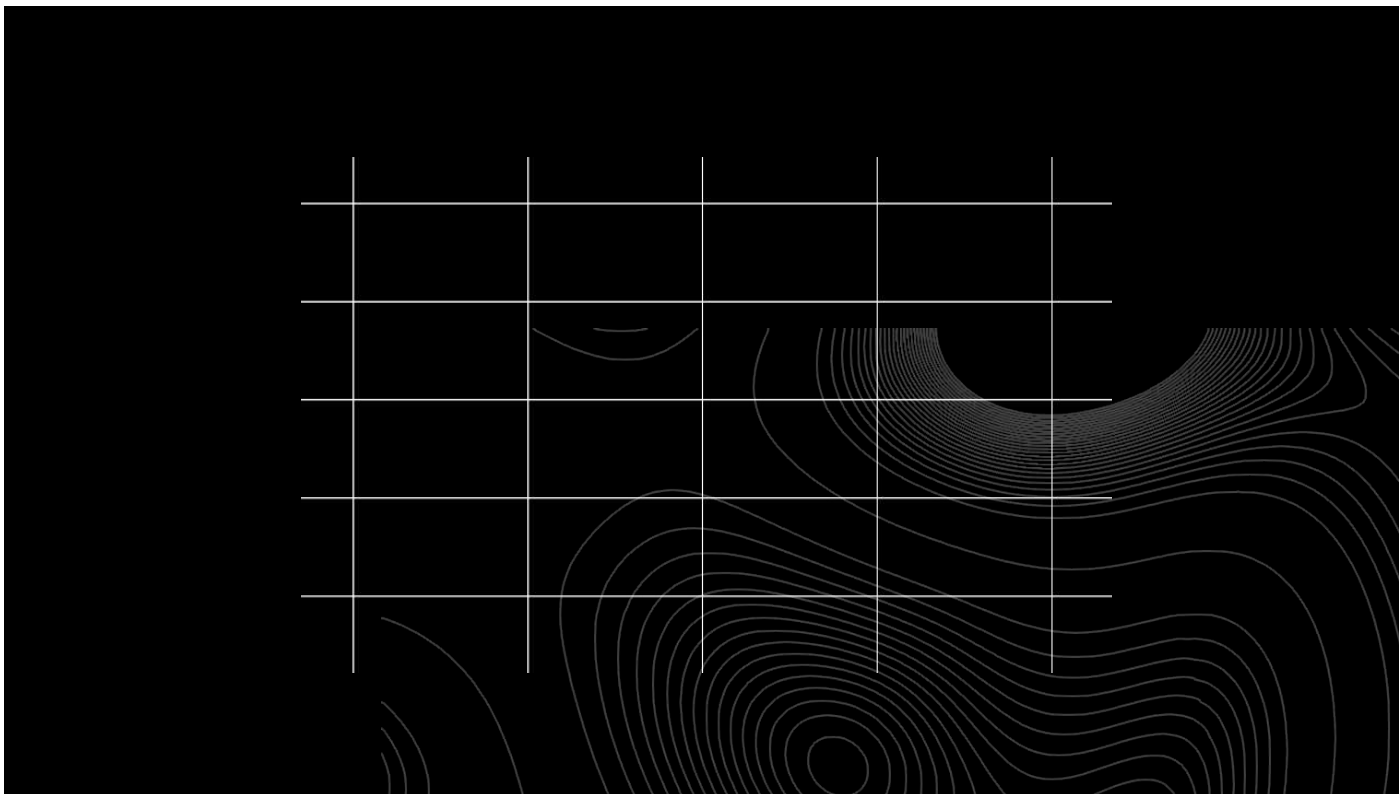

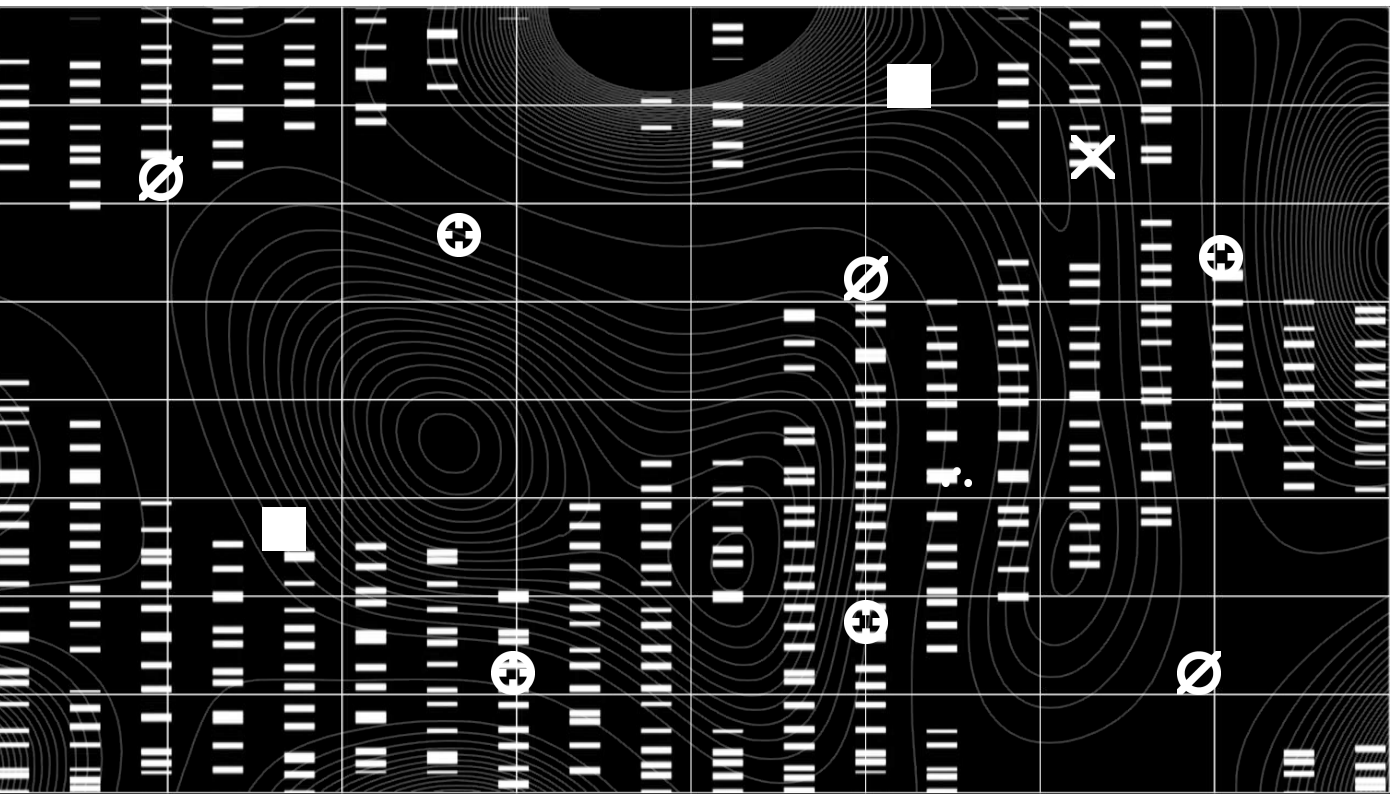

5secs
flickering binary code appears and disappears randomly on the screen

5secs
ascii portaits are masked off and disappear

5secs
Hexadecimal code flickers randomly across the screen

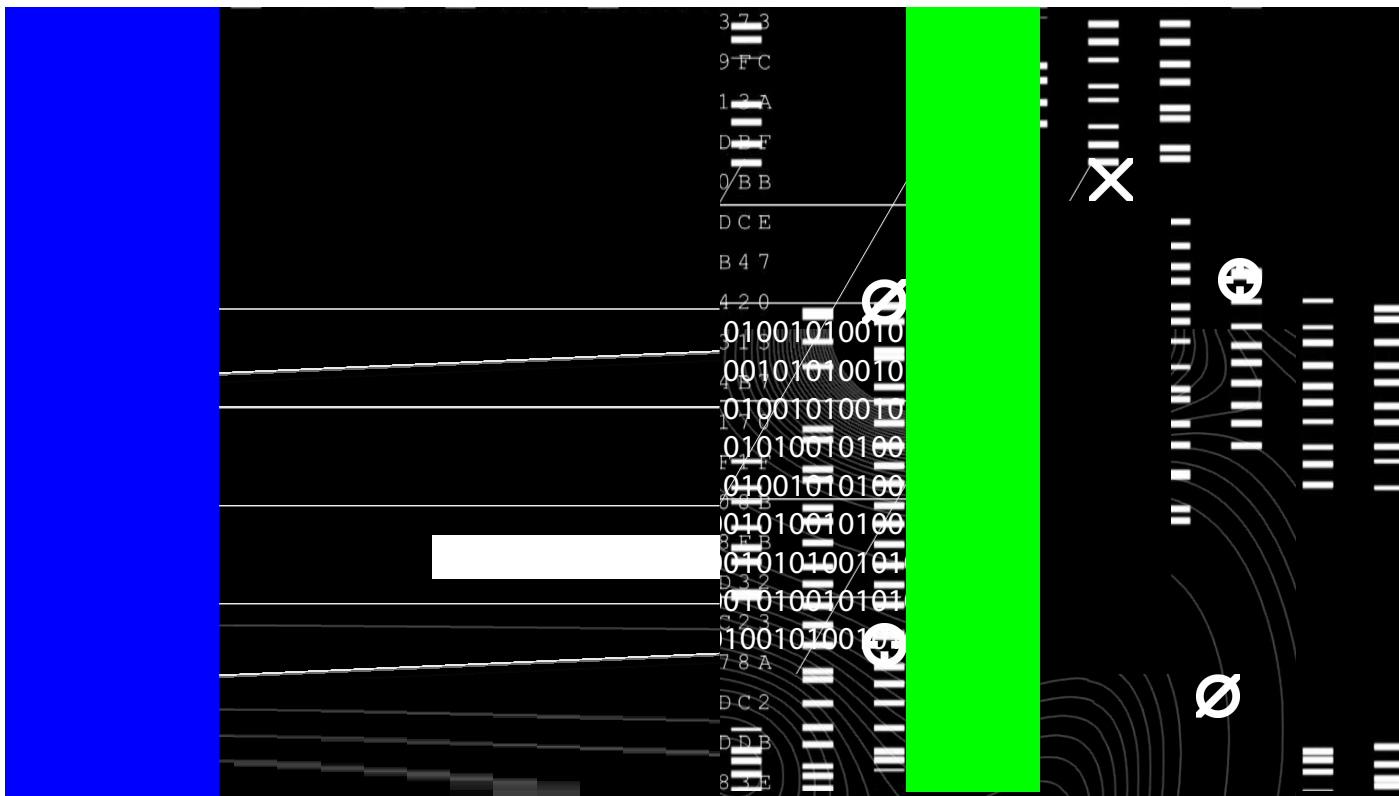

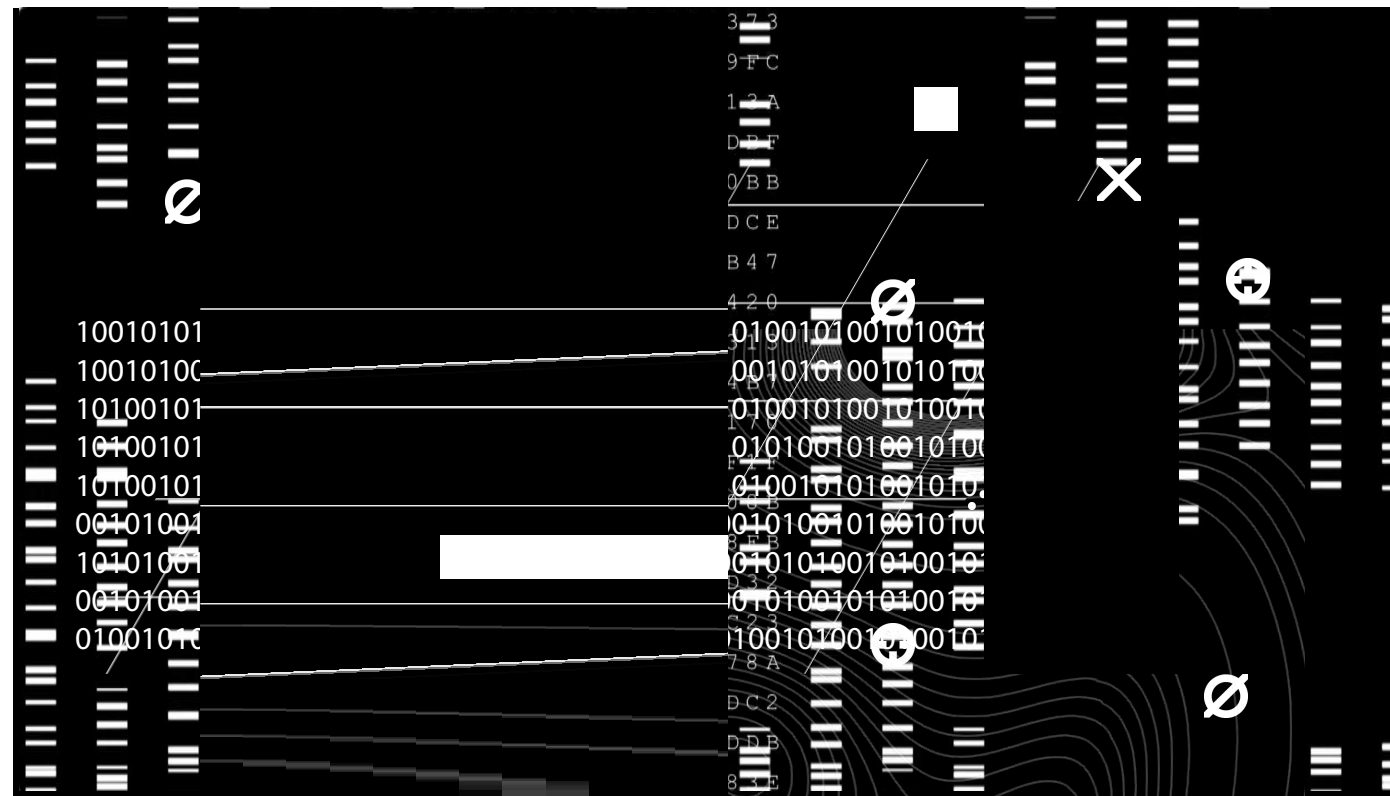

5secs
my own made up symbols do the same. voice is sounding more distorted now and continues to gradually distort more and more

5secs
my symbols start to become mixed with random barcode like patterns

5secs
the grid of the map is masked off now and the contours flicker and go off center

5secs
begin to distort the grid, all symbolic elements are now flickering like crazy and being distorted

5secs
glitch/datamosh effect starts up
add some rgb 'glitch' (or maybe bluescreen) and suddenly cut to black
